

*premise* contains an ever-increasing number of life-cycle inventories (LCI), which are imported upon the creation of prospective LCA databases.

They are stored as bw2io MS Excel format, [here](#).

Most are from the literature and compiled by the developers of *premise*.

But they may have been compiled to link with different ecoinvent versions. Which is why we have a [mapping file](#).

Both inventories and the mapping are accessible on your computer when installing *premise*.
